

Paradigm-busting workbook

It is up to us to interpret the “facts”

Thought exercise: is a given megatrend an opportunity or threat? It could be either, depending on your mindset. Complete this exercise by filling in the blanks, challenging yourself to interpret the “facts”, which many see as threats, as opportunities.

Threat

Opportunity

Aging demographics	Aging population	New “silver market”
Rising health-care costs	Health-care spending	New health-care services and settings
Urban congestion	Urbanization	Smart city infrastructure & micro-mobility
Economic loss and human impact	Sustainability	Growing power and infrastructure needs
Near-term price and energy volatility	Energy price volatility	Accelerated transition to renewables & storage
High competition in rapidly evolving area	Smart devices	Hyper-personalized data ecosystems
Frequent data breaches & loss of personal privacy	Data Privacy & Security	Trusted, secure apps & 'privacy-first' tech

Shifts in our mental models enable us to solve problems and pursue opportunities

Mental models, paradigms, or the way that we think about things help us shortcut thinking to arrive at decisions quickly, but they can also inhibit positive change, keeping us stuck in old ways of thinking.

Small, incremental change in our mental models doesn't always yield the change we need; we need to actively challenge our assumptions to drive meaningful change.

Let's review some examples.

BIC opened the door to new lines of business (e.g., lighters, razors) by shifting mental models

Low-cost airlines shifted prevailing airline paradigms to disrupt the aviation industry

Fill in the blanks.

Describe another mental model shift that has resulted in a major change

Fill in the blanks.
